Human Development Index vs. GDP per capita 2023

Our World
in Data

The Human Development Index (HDI) is a summary measure of key dimensions of human development: a long and healthy life, a good education, and a decent standard of living. GDP per capita is adjusted for inflation and differences in living costs between countries.

Human Development Index

Data source: UNDP, Human Development Report (2025); Eurostat, OECD, IMF, and World Bank (2026)

Note: GDP per capita is expressed in international-\$¹ at 2021 prices.

1. International dollars International dollars are a hypothetical currency that is used to make meaningful comparisons of monetary indicators of living standards.

Figures expressed in constant international dollars are adjusted for inflation within countries over time, and for differences in the cost of living between countries.

The goal of such adjustments is to provide a unit whose purchasing power is held fixed over time and across countries, such that one international dollar can buy the same quantity and quality of goods and services no matter where or when it is spent.

Objetivos de calidad

- La infraestructura pública concesionada mejora el estándar de las obras
- El desafío es lograr que el servicio también sea de excelencia
